Executive Summary

An economic impact analysis was completed by the North Central Wisconsin Regional Planning Commission to answer the question, what would be the economic impact of the proposed interchange at Kowalski Road and Interstate 39 in the Village of Kronenwetter?

As part of the analysis process, a variety of factors were examined including land use, real estate fair market values, and employment. A new interchange would provide easy access to over 450 acres of open land. Much of this has been vacant for years. Transportation access is critical to spur the highest and best use in the area. Real estate values within the metro area at existing interchanges are much higher than the values in the proposed Kowalski interchange area. New development would also bring jobs to the community. Considering land area available, anticipated new development, and jobs per acre a considerable number of jobs would be expected.

Based on the analysis, a positive economic impact is expected if the proposed interchange is built. Substantial commercial, industrial, and residential uses are expected to locate in the area, resulting in fair market value real estate valuation growth between \$72,200,000 and \$120,400,000 along with between 1,200 and 2,100 new jobs expected.

Overall, the proposed Kowalski Interchange would provide substantial economic growth potential for the village as well as better serving the village and surrounding area from a transportation standpoint.

In addition, a variety of demographic and market data was collected for a radius of 25 miles around the proposed interchange. Over 185,000 people comprising almost 79,000 households are within this area. Combined these households annually spend over \$4.8 billion on various consumer goods and services. Those consumer expenditures provide opportunities for businesses that might locate at the proposed Kowalski Interchange. Some of the other attached reports provide information on types of businesses, and the area labor force and workforce.

Chapter 1 Introduction & Purpose

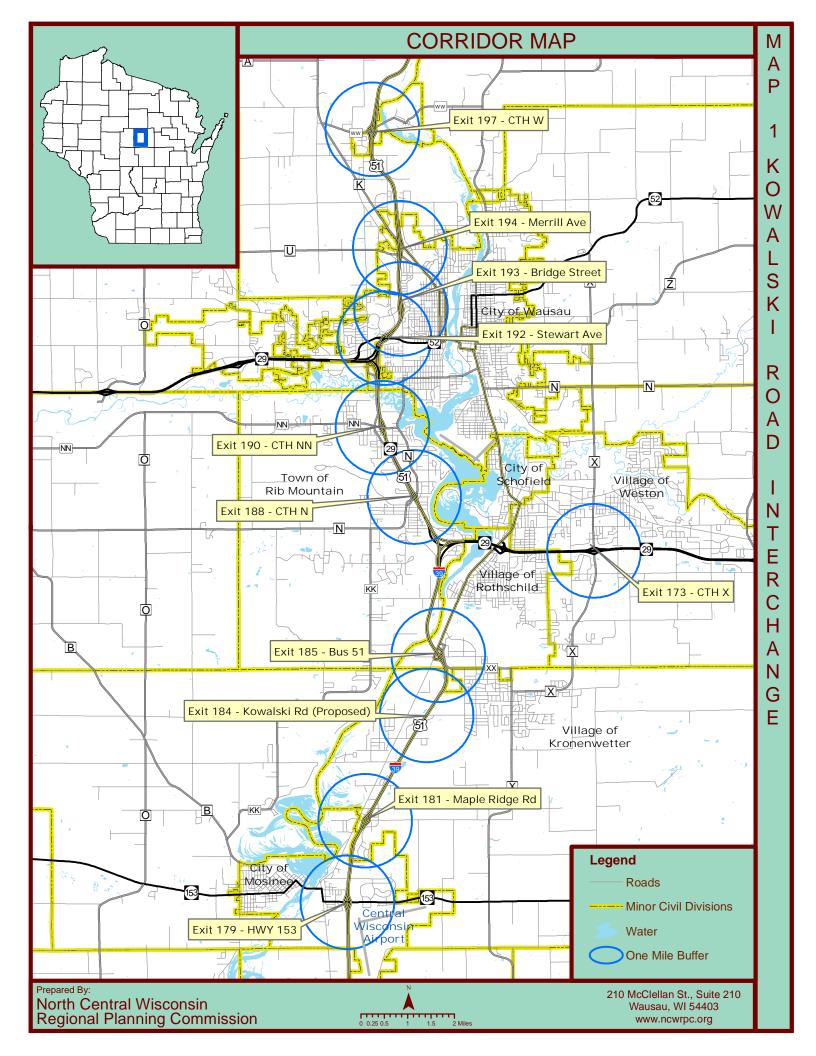

The Village of Kronenwetter has long sought a second interchange at I-39/U.S. Highway 51 and Kowalski Road. Having an interchange at this location would be advantageous for the village as it would allow traffic better access to its business park, provide additional local circulation throughout the village, and encourage additional high value growth and development.

Two existing interchanges currently serve the village. One is located just to the north of the village at Cedar Creek in the Village of Rothchild and the other is at Maple Ridge Road on the southern border of the village near Mosinee. There are a total of eleven interchanges along Highway 39 that serve the entire urban area, ten of which were evaluated as part of this study, **see Map 1.**

Over the last decade, there has been substantial study of a possible Kowalski Interchange. The process of establishing a new interchange is long and requires substantial information, as well as approval by a variety of agencies, including the Federal Highway Administration (FHWA).

Development of a new interchange on the Interstate Highway System begins with a formal request made to the FHWA by the State Department of Transportation, in this case, WisDOT. Although a request may be initiated by others, such as the Village of Kronenwetter, it must be submitted to WisDOT. A request for a new interchange requires an analysis of the planning, environmental, design, safety and operational consequences of the proposed access. WisDOT may decide that the proposed project does not satisfy requirements in terms of operations, safety, design, or environmental considerations. If WisDOT determines the proposed interchange can meet requirements, it submits the preliminary request for review and comment by the FHWA Division Office.

The request comes in the form of a standalone report such as an Interchange Justification Report which contains all the written documentation supporting the request. WisDOT is responsible for ensuring that the data collection and analysis is complete, correct, and appropriate for the proposed request. WisDOT must submit the request to the FHWA Division Office for review. From FHWA's perspective, the submission implies that WisDOT has reviewed the request, it is complete and correct, and the State recommends the proposed interchange be approved.

Interchange approval by FHWA is a two-step process. The first step is a finding of operational and engineering acceptability in accordance with the policy requirements for access to the Interstate System. The second step is final FHWA approval. This approval constitutes a federal action which requires NEPA compliance. Ultimately, the project will also need to meet other federal planning, design, and engineering requirements as it is developed.

The Interchange Justification Report needs to address the appropriate issues and provide the information necessary for FHWA to make an informed decision considering the potential consequences of a new access point. Specifically, the report must address the policy requirements issued by the FHWA.

A number of efforts have been made over the years to get approval of a Kowalski Road interchange. The process did advance to an Interchange Justification Report in 2002. However, the FHWA determined that there were deficiencies in the 2002 request and, approval was never received.

There were two FHWA policy areas that the 2002 interchange proposal failed to meet. These were:

- 1. The need proposed for the interchange cannot be met by the existing system or reasonable improvements to it.
- 2. The proposed interchange does not have an adverse impact on operation and safety of the interstate highway.

FHWA policy indicates that it must be demonstrated that the need to be addressed by a proposed interchange cannot be adequately satisfied by existing interchanges to the Interstate, and/or local roads and streets in the corridor can neither provide the desired access, nor can they be reasonably improved (such as access control along surface streets, improving traffic control, modifying ramp terminals and intersections, adding turn bays or lengthening storage) to satisfactorily accommodate the design-year traffic demands. WisDOT and FHWA will ask the question(s): "Why is this project needed, and why can't that need be met more efficiently by other parts of the existing system?"

On behalf of the Village, the NCWRPC has analyzed the 2002 Kowalski Road Interchange Request in 2011 and again in 2019. In those reports, the NCWRPC recommended the following actions:

- Formally request that the DOT North Central Region begin early coordination, including consultation with FHWA, and meet with the Village to gain a better understanding of the current feasibility of a Kowalski Interchange.
- Request that DOT seek clarification from FHWA regarding the Policy on Access to the Interstate System and the content required for an Interchange Justification Report.
- Request that DOT identify criteria that would need to be satisfied as part
 of the NEPA process in order to get the project approved as well as other
 statutes and regulations applicable to the approval process.

These issues lead to the operational efficiency question which the Village is currently working to address. To further explore the question of project need, the Village has requested the NCWRPC to analyze the economic impact a new Kowalski Interchange would have on the area.

This proposed Kowalski Interchange would better serve the community and provide substantial economic growth potential. That economic growth potential is the basis of this report. Basically, answering the question, what is the economic impact of this proposed interchange? Land use, employment levels, housing units and real estate values are examined here. In addition, there is a variety of market information provided as an attachment.

Chapter 2 Review of Study Area

Any planning effort needs to start with some basic background information. This includes population, projections, land use, and valuation. We also reached out to the Wausau Area MPO for some of the modeling data related to the interchange.

Population

An increasing population places a greater demand on the transportation system. Knowing where the population is growing justifies additional transportation infrastructure and supports related development.

The population in the Wausau urban area has shown steady growth. In 2000 the population was 74,580, and by 2020 it was 83,559, with the greatest growth in the Weston and Kronenwetter areas. Both historic population data and population projections are shown below.

In 2020, 8,353 people lived in the Village of Kronenwetter, a 55.6 percent increase since 2000. In comparison, Marathon County experienced a 9.7 percent increase in population over the same time period. Population in the Village and County has steadily increased between 2000 and 2020, however population growth in the Village has significantly outpaced the County.

Table 1 displays total population for the Village, nearby municipalities, the County, and the State. The Village of Kronenwetter experienced the fastest population increase between 2000 and 2020 among the municipalities included in the analysis. Only the Village of Weston experienced growth comparable to Kronenwetter during this time period, while only the Town of Rib Mountain experienced a decrease in population.

Table 1:					
Population					
Minor Civil Division	2000	2010	2020	Net Change	% Change
V. Kronenwetter	5,369	7,210	8,353	2,984	55.6%
V. Weston	12,079	14,868	15,723	3,644	30.2%
V. Rothschild	4,970	5,269	5,567	597	12.0%
C. Wausau	38,426	39,106	39,994	1,568	4.1%
C. Mosinee	4,063	3,988	4,452	389	9.6%
T. Rib Mountain	7,556	6,825	7,313	-243	-3.2%
C. Schofield	2,117	2,169	2,157	40	1.9%
Marathon County	125,834	134,063	138,013	12,179	9.7%
Wisconsin	5,363,715	5,686,986	5,893,718	530,003	9.9%
Source: U.S. Census					

Population Projections

The Village of Kronenwetter's population is projected to increase to 10,070 residents by the year 2040, a 20.6 percent increase from the total population in 2020. Projections in most of the surrounding area are anticipated to peak between 2035 and 2040, as shown in **Table 2**.

The village is projected to experience the second fastest increase (20.6%) in population between 2020 and 2040. The City of Wausau and Village of Rothschild are projected to experience modest growth during this time, while the Town of Rib Mountain and Cities of Mosinee and Schofield are projected to decrease in population during this time. This can likely be attributed the Village's large amount of undeveloped land available for development.

Table 2:				
Population Projections				
Minor Civil Division	2025	2030	2035	2040
V. Kronenwetter	8,765	9,295	9,730	10,070
V. Weston	17,870	18,890	19,700	20,330
V. Rothschild	5,655	5,755	5,795	5,790

Source: Wisconsin Department of Adm	inistration			

Interchange Analysis

To best understand the potential for development of the Kowalski Interchange we examined the surrounding land uses, traffic counts, soil suitability, and existing land use.

Traffic levels drive development. The higher the volume of traffic travelling past an area the higher types of development with the highest fair market values occurs. Examining development along the corridor reveals that some of the highest values per acre are concentrated in these areas. In 2020 over 34,000 vehicles past this area every day. See **Table 3**.

The study area is defined as a one-mile circle around the I-39 and Kowalski Road crossing. In all, there are 2,010 acres in the study area. Examining the comprehensive plan existing land use map identifies a variety of uses in the proposed interchange area. Woodlands and open lands are primary uses, with much of this being wetlands or poor areas for development. There are approximately 295 acres currently being classified as industrial and about 191 used for residential. See **Table 3** and **Map 2**.

Soil Suitability for Small Commercial Buildings	Areas NE, SW, and NW are Not Limited Area SE ranges from Not Limited to Very Limited				
Development Opportunities & Limitations	Opportunities: Surrounding land is mostly undeveloped. Limitations: Floodplains present in all directions, some residential building limitations are present, especially in SE Area.				
Source: NCWRPC, V	VisDOT				

Area Valuation

Current real estate and improvement data was reviewed to determine base value of the planning area. When looking a full mile from the interchange nearly 2,000 acres are accessible. Of that over 500 acres would be removed for environmental restraints and 1,000 acres is already developed – leaving about 450 acres for potential new development. From a valuation perspective, the 1,500 acres already developed has a Fair Market Valuation of \$62,318,400 or approximately \$40,128 per acre.

If an interchange was constructed a considerable amount of land would be more easily accessible for development.

The following scenarios present options for the use of those undeveloped acres.

Note that about 60 acres within this area are in the Village of Rothchild. All the rest is within the Village of Kronenwetter, however, about 465 acres of this area is located within one mile of the existing Cedar Creek Interchange. Much of this area is already developed, and the rest would be more easily served by a Kowalski Interchange.

Long Range Transportation Plan

As a formal Metropolitan Planning Area, the Wausau urban area is required by federal guidelines to prepare a long-range transportation plan every five years called a Long-Range Transportation Plan or LRTP. A LRTP reflects the vision and direction of local officials, relevant agencies, stakeholders, and the general public as it related to the transportation system. Marathon County is currently preparing a five-year Long-Range Transportation Plan (LRTP).

As part of that planning process, WisDOT maintains an active Travel Demand Model for the Wausau area. Recently, the Travel Demand Model was updated and utilized to evaluate a number of potential future transportation projects for the long-range plan, including a Kowalski Interchange.

Based on socioeconomic and land use data, the Travel Demand Model calculates the number of vehicle trips, where these trips are coming from and going to, and then chooses the routes these vehicle trips would take on the model's roadway network. The model is created using current base year data and calibrated with actual traffic counts to replicate existing traffic conditions. The model then develops projected traffic based on 2050 population, household, and employment projections within the metro-area.

The model uses a standard called Level of Service (LOS) which measures the performance of the roadway by incorporating not only the roadway design but also by calculating the projected travel delay as traffic moves along the system. This produces an indicator of the quality of traffic service related to speed, density, etc. in an easy-to-understand standard classification system using letters, from "A" (free-flowing traffic) through "F" (forced or breakdown flow).

Continued population growth will place a greater demand on the existing transportation system. Adding another interchange would increase capacity and help the system long-term. According to the LRTP model, at Kowalski and Tower there are over 1,800 vehicles per day using that intersection and by 2055 it is expected to increase to over 3,500. The model also examined impacts on that intersection with a proposed Kowalski Interchange, and the results indicate that over 8,600 vehicles would use that interchange. Reductions would occur at both Old 51 northbound and on County XX as vehicles use the new interchange.

Chapter 3 Assumptions & Scenarios

Assumptions

To determine economic impacts a variety of assumptions need to be made. The data needs for this planning study are market valuation of land uses, employment levels for both commercial and industrial uses, and development patterns. Note that this study does not review construction impacts since those are one-time short-term impacts. Below we detail the assumptions utilized for this study.

Land Values

The study examines the land uses within one mile of the interchange. This is where most development occurs, and it usually does not overlap into areas served by other transportation facilities. Fair market value of potential "interchange" development at Kowalski, was determined by examining all nine of the existing interchanges in the Wausau Area along Highway 39, from Maine to Mosinee, and the interchange at Highway 29 and X in Weston.

Those interchanges were examined for two reasons. One to determine typical development patterns in the area and the second is to understand valuations of various uses. There was some overlap at interchanges 192, 193 and 194 because of the proximity. Therefore, those values were reduced by half for this study to remove double counting of valuation. There will also be some overlap between the interchange at 185 – Business 51 and the proposed Kowalski Interchange. That will be noted in the next chapter.

Based on GIS analysis, the average value of an interchange acre of manufacturing/industrial land is \$206,847, commercial land is \$331,300 and residential land is \$225,897. These values are used for the potential interchange.

Employment

To determine employment levels based on land use, we utilized the Marathon County Comprehensive Plan. That plan identified 37,456 jobs in the commercial area and 22,265 jobs in the industrial area. Commercial includes the following categories: retail, health care, professional services, food & accommodations, information services and finance & insurance. Industrial includes the categories of manufacturing, wholesale trade and transportation. The plan also identifies

5,486 acres of commercial lands and 5,185 acres of industrial lands in the county. We then perform a calculation to determine employment per acre.

Commercial employment per acre equals, 37,456/5,486, or 6.83 jobs per acre.

Industrial employment per acre equals, 22,265/5,185, or 4.29 jobs per acre.

Development Scenarios

Three different development scenarios are examined as part of this study, As discussed earlier, of the 2,000 acres in the area over 1,500 are already developed or undevelopable for various environmental restraints. Thus, the focus of each scenario is what happens with the available 450 acres of land.

Scenario A is developed using the adopted Village of Kronenwetter comprehensive plan, Scenario B is based on existing land uses and market trends, and Scenario C is a balanced approach.

Note that a diamond designed interchange is assumed for each scenario. It is estimated that in addition to current highway right of way an additional 20 acres would be required.

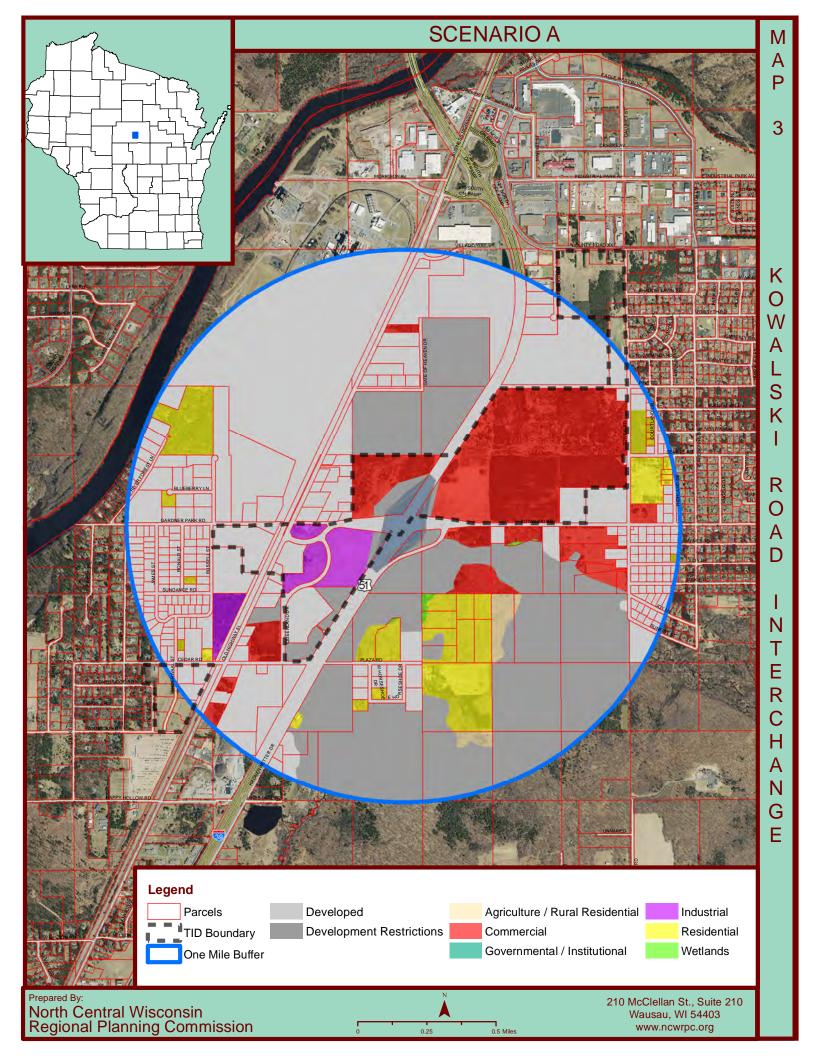

All three are discussed below:

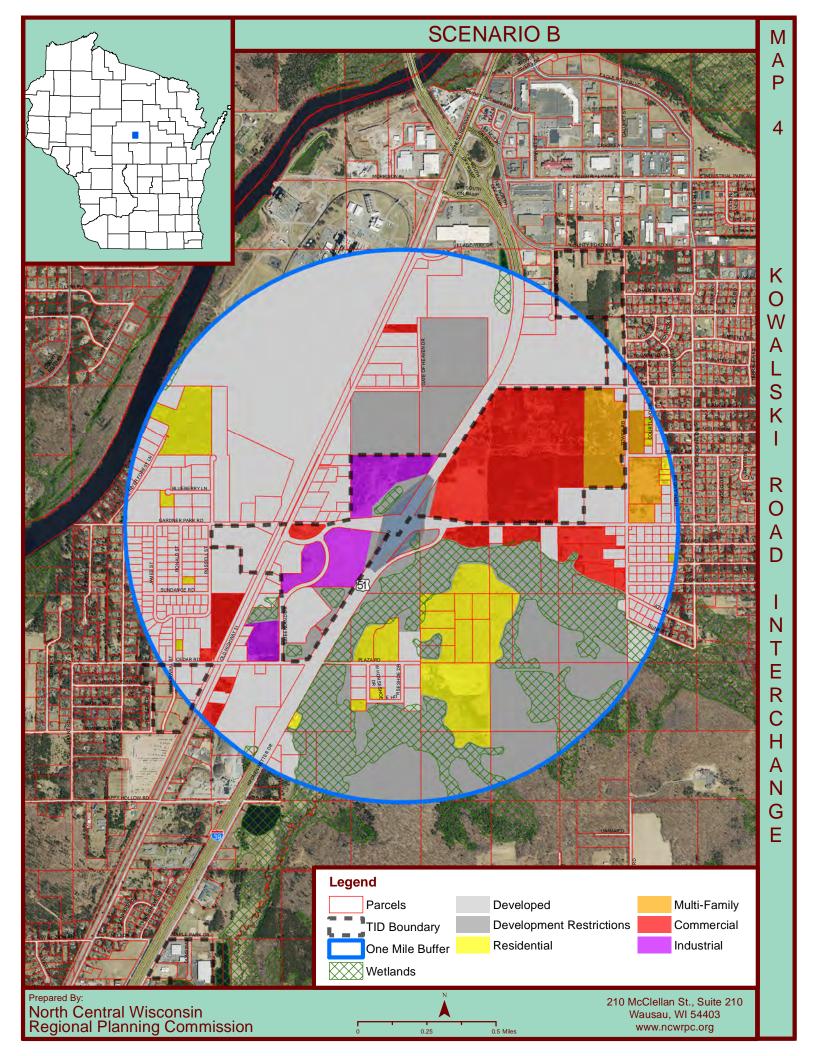

Scenario A -Comprehensive Plan

This scenario is based on the future land use identified in the village's comprehensive plan. Currently about 1,553 acres are developed or have development constraints. The balance or 457 acres at build out as identified in the plan, would add 167 acres of industrial/manufacturing, 153 acres of residential and 137 acres of commercial. See MAP 3.

Scenario B - Market Trends

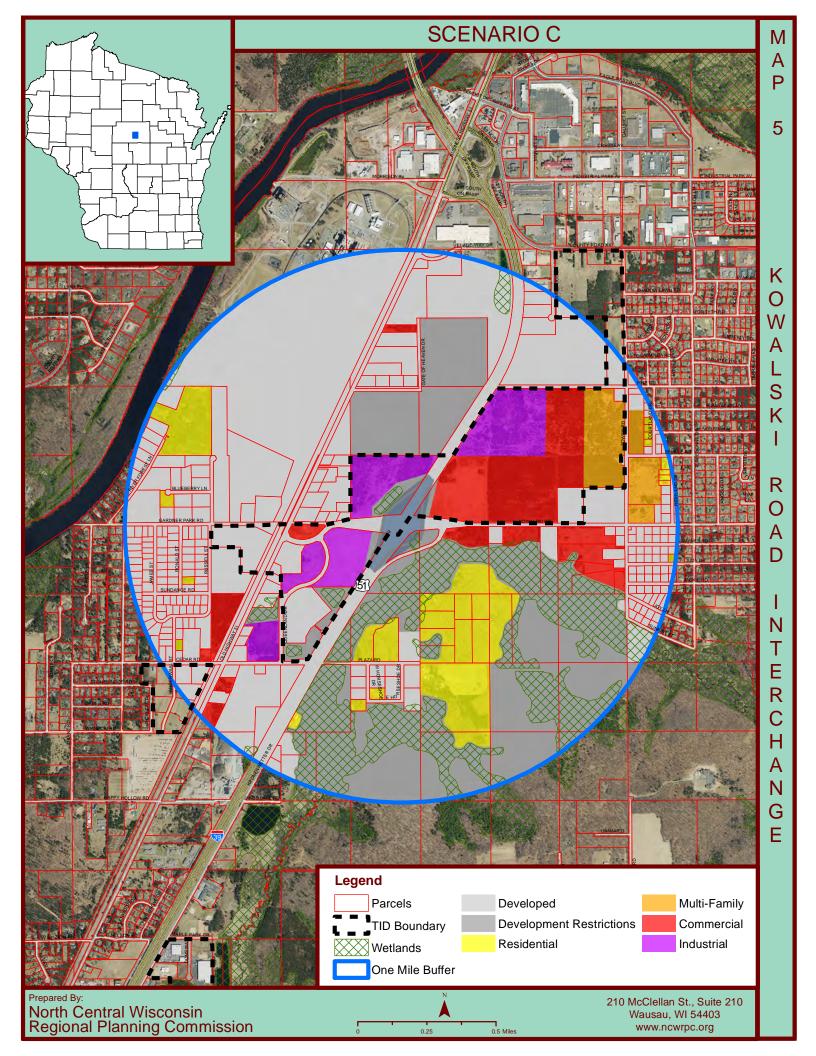

This scenario is based on the existing land use and a natural extension of those uses. Currently about 1,553 acres are developed or have development constraints. The balance or 457 acres at build out, would add 65 acres of industrial/manufacturing, 200 acres of residential and 192 acres of commercial. See MAP 4.

Scenario C - Balanced Development

This scenario is based on an equal split or balancing of land uses. Currently about 1,553 acres are developed or have development constraints. The balance or 457 acres at build out, would add 152 acres of industrial/manufacturing, 153 acres of residential and 152 acres of commercial. See MAP 5.

Chapter 4 Economic Analysis & Impacts

The tables on the following pages detail each of the three scenarios discussed earlier. Each table provides information on land use, acres, fair market values and job creation.

The tables first display land area already developed or undevelopable. Then it identifies acres for manufacturing/industrial, residential and commercial. Fair Market Value information and total values are then displayed. Job creation is also presented for both manufacturing/industrial and commercial uses. Finally, all is summed. Next, we remove the current value of existing development and assumed development of area at buildout at existing valuations. The result is the potential valuation change with a Kowalski Interchange.

Table 4 overviews the Comprehensive Plan scenario. About 1,553 acres are already developed in this area with a fair market value of \$62,318,400. Of the 457 acres of land for development this scenario follows the future land use plan and adds 167 acres for manufacturing/industrial uses, 153 acres for residential and 137 acres for commercial development.

These acres if built-out at current valuation – without the interchange – would be valued at about \$18,338,383. With the interchange and the higher intensity development, at buildout we would expect to see a valuation in today's dollars totaling \$96,308,407.

Table 4 - Scenario A						
Kowalski Interchange Econo	mic Impacts					
Land Use	Acres	FM Value (1)	Total Value	Jobs (2)		
Developed areas*	1,553		\$ 62,318,400

Economic Impact Summary

All three scenarios result in a positive economic impact and add jobs. Based on the analysis, if the Kowalski Interchange was constructed, there appears to be a potential fair market value within the one-mile radius of the interchange of between \$72,231,305 and \$130,119,590 along with the addition of between 1,193 and 2,113 jobs. **See Table 7.**

Table 7 - Comp				
Kowalski Inter	change Economic	Impacts		
	Potential FMV	75%	100%	125%
Scenario A	\$ 96,308,407	\$ 72,231,305	\$ 96,308,407	\$ 120,385,509
Scenario B	\$ 104,095,672	\$ 78,071,754	\$ 104,095,672	\$ 130,119,590
Scenario C	\$ 98,175,202	\$ 73,631,402	\$ 98,175,202	\$ 122,719,003
	Jobs	75%	100%	125%
Scenario A	1,652	1,239	1,652	2,065
Scenario B	1,590	1,193	1,590	1,988
Scenario C	1,690	1,268	1,690	2,113

As with any study related to future impacts, they are based on historic trends. Some of these may not occur or may change. Market trends in the retail and commercial have been changing for a variety of reasons, including on-line sales and most recently the pandemic. Industrial and manufacturing expansions have slowed as the result of labor force scarcity. All of these and more may impact this project.
